- Skilled resources in .NET, Java/J2EE, QA tools, E-learning technologies, and Oracle/MS SQL Server.
- Resourced provided to work at your site or our equally enabled facility in Lucknow in India
- professionals, strong & dedicated team

OUR MISSION

To meet the mammoth requirement, we at ACS-bioINFORMATICS have launched On Job Training Program. The program is targeted at bright and fresh candidates selected as per the selection process of ACS-bioINFORMATICS. The 6 months long program will include 6-8 weeks of exhaustive class-room and practical training conducted by experienced professionals, the remaining period is On-Job Training. On successful completion of the program the candidate would get a certificate from ACS-bioINFORMATICS and also could land with Job opportunities in the industry as well other business organization including our organization.

The Process – Why invent wheel again?

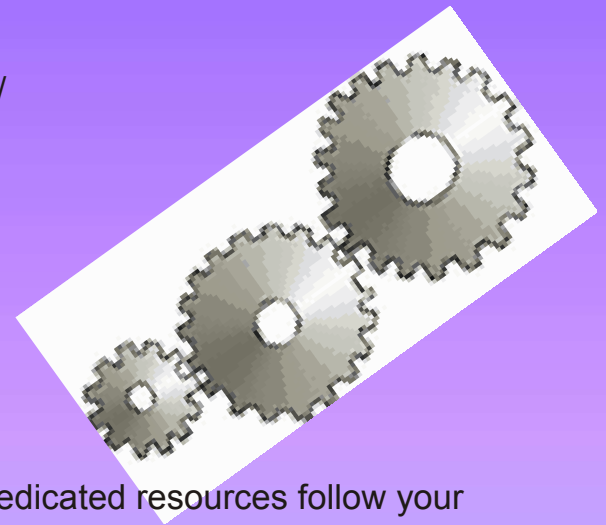

Even though FCS can provide its own tested methodologies for project management and quality control, our first and foremost focus is to provide you easily manageable skilled resources. We do not want you to have one set of hiring and managing criteria for in-house resources, and entirely another for outsourced onsite or offshore resources.

- FCS will work to build same processes and same quality metrics that you would do if you
hire and deploy these resources in-house at your site
- We work with you to have same hiring process, same training process, and same ongoing quality checks as you have at your facility to ensure that you feel no difference when out
sourcing the work to us
- Performance Tracker and Management System with clearly defined key responsibility areas
and indicators at all levels
- Operational Dashboard to track and monitor individual /
team metrics
- Well-defined multi-level escalation process
- Streamlined communication process through:

Quality Paradigm

Quality is not a separate task at FCS. Even though your dedicated resources follow your systems and methodologies, our senior managers (not billed to you) work with all client teams to ensure that best practices are followed to build quality in our daily work. Some of the best practices are:

1. Daily build of the work completed till the end of day
2. Test cases, test data, and test results are documented unit-by-unit
3. Impact analysis of any bug fix or enhancement when maintaining an application
4. Impact analysis on final delivery if specifications change for any reason and setting of new targets
5. FCS supports customer driven project specific standard methodologies like incremental, iterative, Xtreme programming
6. More work and documentation at the design time or knowledge transfer stage ensures that quality standards are maintained

Project Management Goal- Create Easy to Manage Global Teams

ACS provides single point contact collaboration manager to ensure that you spend most of your time on your business needs while our collaboration manager assures reporting and escalation to your project manager. While onsite staff works directly under your supervision, your offshore staff is assigned a Project Leader to make managing offshore resources very transparent and easy.

- Daily builds
- Daily work report
- Daily phone calls using our toll free numbers
- Offshore resources can work directly on your servers using secure VPN connections
- Online project management tools

ACS Value Proposition

- Financially stable, listed company in business for last 12 years
- Resources hired, trained, and monitored directly using client processes
- Servicing Fortune to small corporations. Some of our clients are GE, Canon, Best Buy, to small ISVs Transparent working model
- State of the art infrastructure
- Security and consistency
- World class quality resources
- High ROI, no hidden cost
- Virtual extension of your office

Better return on your people assets – Get More value for less money
